

Capability Statement

Company Overview ✨

Bar Mining delivers mining component repair and overhaul services with a focus on what matters most to operations, turnaround time, accountability, and reliability.

As an owner-operated business, all work is carried out and overseen by experienced tradespeople, not handed off through layers of management. This results in faster response, direct communication, and consistent quality across every job.

With a lean operating structure, Bar Mining offers competitive pricing without compromising workmanship, providing a practical and reliable alternative to larger overhaul providers.

We strive to deliver a cost-effective quality service specialising in general engineering, overhauling, manufacture, and maintenance. Our core values being a big focus on safety, quality, reliability, and delivery, we also offer a 24hrs support mechanism to support our customers to ensure reliability and productivity.

01

EQUIPMENT OVERHAUL

We support the overhauling of all underground coal mining development equipment which includes and not limited to the following.

- UG Coal cutting machinery
 - Continuous Miner components & gearboxes including cutterheads
 - Shuttle Car gearboxes
 - Drive systems

02

INVENTORY & PART SUPPLY

Reliable sourcing and supply of high-quality components and materials to support maintenance, repairs, and rebuilds.

- Strong commitment to stocking & supply of critical components & parts.
- Service exchange programs on critical components.

03

BREAKDOWN SERVICES

Bar Mining Pty Ltd delivers rapid response breakdown services to restore equipment to operational condition with minimal disruption.

04

SERVICE DELIVERY

- Reduced downtime
- Single point accountability
- Rapid response
- Quality controlled
- Cost effective solutions

Safety & Quality Assurance ✦

Bar Mining Pty Ltd operates with a strong focus on safety, risk management, and quality control across all workshop and site-based activities.

Our safety approach is embedded in daily operations and includes:

- Pre-starts and toolbox talks
- Job-specific risk assessments
- Safe Work Method Statements (SWMS)
- Ongoing hazard identification and control

All work is carried out with a proactive focus on minimising risk to personnel, equipment, and site operations.

From a quality perspective, Bar Mining applies structured control measures to all component overhauls and rebuilds, including:

- Inspection and assessment prior to work commencement
- Defined hold points throughout the repair process
- Measurement, testing, and verification of critical tolerances
- Non destructive testing
- Final inspection and sign-off prior to delivery

This approach ensures all work is completed to a consistent, high standard reducing rework, preventing premature failure, and supporting reliable performance in demanding mining environments.

Workshop & Coverage Area ✦

Bar Mining Pty Ltd operates from a fully equipped workshop located in Rutherford, NSW, within the Hunter Valley, strategically positioned to support the region's underground coal operations.

This location enables rapid response times, reduced transport costs, and efficient mobilisation.

Workshop Capabilities

- Heavy component handling with mobile crane capacity
- Disassembly and rebuild area
- Machining capability
- Hydraulic pressing and assembly equipment
- Precision measurement and inspection tooling

The 400m² workshop is set up to support major component overhauls, including gearboxes, drive systems, and continuous miner components.

Bar Mining Pty Ltd supports mining operations across key regions of Australia, with established service coverage including:

- Hunter Valley
- Illawarra
- Gunnedah Basin
- Central Qld

Work is predominantly workshop driven, with components transported to and from site, ensuring efficient turnaround and controlled repair conditions.

People behind the business ✨

Bar Mining is a family owned and run business led by experienced tradespeople with strong backgrounds in mining equipment repair, overhaul, and maintenance.

Our Managing Director, Blake Rutherford, brings over 13+ years of hands-on industry experience across component repair, rebuilds, and field service support within the mining sector. With a practical, solutions-focused approach, he is directly involved in the delivery of work ensuring quality, accountability, and clear communication from start to finish.

Bar Mining operates with a lean, highly capable team of qualified tradespeople, bringing a combined 25+ years of industry experience. The team has worked across a wide range of mining equipment, including gearboxes, drive systems, and underground development machinery. Unlike larger workshops, Bar Mining provides direct involvement from senior personnel on every job. This ensures:

- Consistent quality and attention to detail
- Faster decision making and problem solving
- Clear accountability for outcomes

Clients deal directly with the people completing the work, not layers of management, resulting in a more responsive and reliable service.

Bar Mining Pty Ltd provides rapid response component repair, overhaul, and supply solutions to the mining and heavy industry sectors. For all enquiries, quotations, or urgent breakdown support, please contact directly.

Track Record & Industry Experience ✨

Bar Mining Pty Ltd draws on extensive hands-on experience in the overhaul, repair, and maintenance of mining equipment within underground coal operations.

The team brings a combined 25+ years of industry experience, with strong exposure to OEM equipment and component rebuilds.

Equipment Experience Includes:

- Gearboxes and drive systems
- Continuous miner components
- Conveyor and material handling systems
- Hydraulic and mechanical assemblies

OEM Experience:

- JOY (extensive hands-on experience)

Bar Mining has strong familiarity with JOY equipment, particularly in the overhaul, fault identification, and rebuild of components associated with continuous miners and underground development systems.

Bar Mining operates within a trusted network of specialist suppliers and service providers, allowing the business to scale capacity when required while maintaining a single point of accountability for all work delivered.
